a. Synopsis of the Game

The game is a 3D horror stealth experience that takes place inside Champlain College after hours. The player controls a student who is trapped inside the school at night and must find a way to escape. While navigating through dark hallways, classrooms, and other areas of the building, the player must avoid being detected by teachers who patrol the school. The game focuses on tension, limited information, and sound-based gameplay to create a frightening and immersive experience.

b. The Story of the Game

The story follows a student who accidentally gets locked inside Champlain College after staying too late. At first, the situation seems harmless, but the atmosphere quickly becomes unsettling. The lights flicker, the hallways feel unfamiliar, and strange noises echo through the building.

As the player explores, they realize they are not alone. Teachers are still present in the building, but they silently patrol the hallways and react aggressively to any disturbance. The student must navigate through the school, uncover keys, and ultimately find an exit while avoiding these threats.

The story is intentionally minimal to enhance mystery and tension, leaving the player to question what is really happening inside the school.

c. Rules of the Game

- The player must escape the school without being caught.
- The player must avoid being seen by teachers at all times.
- The player must control their noise level, as running or interacting with objects can attract nearby teachers.
- If
- The player gets caught, it’s game over.
- The player must explore the environment to find a way out (keys, doors, or exits).
- The player can use stealth (walking or crouching) to reduce noise and visibility.

d. Mechanics of the Game (All Controls)

Movement:

- **Run (Default):** The player moves quickly but generates noise, making it easier for teachers to detect them.
- **Walk (Hold Shift):** Reduces movement speed and noise, making it safer to move near enemies.
- **Crouch (Ctrl or C):** Further reduces noise and visibility, allowing the player to hide more.

Stealth System:

- Noise is a core mechanic: louder actions increase the chance of attracting teachers.
- Teachers react to both **sound** and **line of sight**.
- Staying out of sight and moving quietly is essential.

Enemy Behavior:

- Teachers patrol hallways and certain areas of the map.
- They investigate noises made by the player.
- If they see the player, they will chase or immediately catch them.

Environment Interaction:

- The player can explore rooms, hallways, and possibly interact with doors or objects.
- Some paths may be locked and require exploration to progress.

Menu Structure and Interface Design

Overview

The game uses a dark horror-themed menu system that matches the atmosphere of the project. The menu appears over a dim background, with simple white text buttons aligned on the right side of the screen. This keeps the interface clean, readable, and appropriate for a horror game.

The menu system is divided into the following main parts:

- **Main Menu**
- **Options Menu**
  - Audio
  - Controls
- **Credits Menu**
- **Pause Menu**
- **Game Over Menu**
- **Victory / Escape Menu**

This structure allows the player to start the game, adjust settings, learn controls, pause during gameplay, and restart or quit after winning or losing.

Map Design

For the map we are going to take the first floor of Champlain College and model it in 3D. We will be eliminating the Gym side of the first floor due to time and technicality constraints

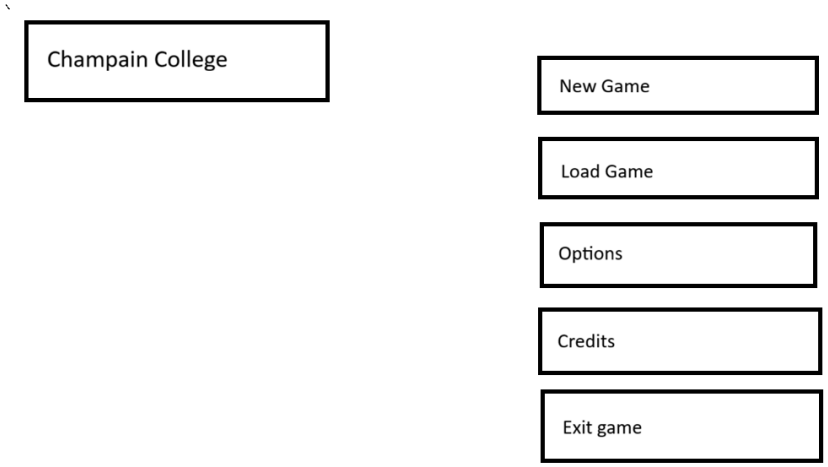
Lets Go! Upstairs!
Amphitheatre
1st floor

Logo Design

We have decided to go with the pun Champain College for the name of the horror game and here are the logo made on Adobe Photoshop

Main Menu Wireframe



We also made a video background for the menu with a smoke overlay and the animated logo at the top. The video as made on Adobe After Effects

3D Models

We started slowly with 3D models by starting with one of our easiest models to make, the key to escape. The key was made on Blender.
